Trueman et al.s http://www.jcb.org/cgi/content/full/jcb.2ロ12ロ7163/DC1

Figure S1. Growth rates of selected sec6 1 lateral gate mutants. Yeast strains were grown in YPAEG media at $30^{\circ} \mathrm{C}$ to mid-log phase. After dilution of cells to 0.1 OD at $600 \mathrm{~nm}, 5-\mu$ l aliquots of fivefold serial dilutions were spotted onto YPAD plates that were incubated at 30 or $37^{\circ} \mathrm{C}$ for 2 d .

Figure S2. Hydropathy plots for CPY, CPY derivatives, and DPAPB. Hydropathy plots of the first 50 residues of ppCPY $+2 \mathrm{~A}, \mathrm{ppCPY}+2 \mathrm{~B}, \mathrm{ppCPY}+4$, and $\mathrm{ppCPY} \Delta 6$ are compared with hydropathy plots of ppCPY and DPAPB. Hydropathy plots were prepared using MacVector, Inc. software using the Goldman-Engelman-Steitz algorithm. Arrows designate the signal sequence cleavage site for CPY and the predicted signal sequence cleavage sites for the CPY mutants as calculated by SignalP 4.0.

Figure S3. Conservation of the lateral gate polar cluster. Sequence logos of eubacterial TM2 and TM3 derived from 1573 SecY sequences. Residues are color coded by side chain property; letter height is proportional to frequency. The M. jannaschii and E. coli sequences flank the eubacterial logo. Numbers correspond to the $S$. cerevisiae Sec61 sequence. Arrows designate the residues that align with T87 and Q129 of S. cerevisiae Sec61.

Table S 1. Translocation assays of the sec61 apolar patch mutants

${ }^{\text {a }}$ Values for percentage of translocation of $\operatorname{DPAPB}, C P Y, C P Y \Delta 2$, and $C P Y \Delta 4$ are the means of two or more determinations. Error bars are standard deviations or, when two assays were done, the difference between the mean and an assay value. Errors $<1 \%$ were rounded up.
${ }^{\text {b }}$ The sum of the percentage of translocation ( p 1 CPY ) for the CPY, CPY $\Delta 2$, and $C P Y \Delta 4$ reporters.
${ }^{\text {c T The value for }} \Delta$ translocation is obtained by subtracting $\Sigma \mathrm{plCPY} \mathrm{wt}^{\text {trom }} \Sigma \mathrm{plCPY}$ m.
