The Journal of Cell Biology
Volume 133, Number 5, June 1996

929 Demonstration of a dynamic, transcription-dependent organization of pre-mRNA splicing factors in polytene nuclei.
G. Baur6n, W.-Q. Jiang, K. Bernholm, F. Gu, and L. Wieslander

943 Metazoan rDNA enhancer acts by making more genes transcriptionally active.

955 Nuclear proteins of quiescent Xenopus laevis cells inhibit DNA replication in intact and permeabilized nuclei.
J. Fang and R.M. Benbow

971 A GTPase distinct from ran is involved in nuclear protein import.
D.J. Sweet and L. Gerace

985 Evidence using a green fluorescent protein-glucocorticoid receptor chimera that the RAN/TC4 GTPase mediates an essential function independent of nuclear protein import.

1007 Multiple features of the p59\textsuperscript{src} homology 4 domain define a motif for immune-receptor tyrosine-based activation motif (ITAM) binding and for plasma membrane localization.
L.K. Timson Gauen, M.E. Linder, and A.S. Shaw

1017 A new pathway for protein export in Saccharomyces cerevisiae.
A.E. Cleves, D.N.W. Cooper, S.H. Barondes, and R.B. Kelly

1027 Differential distribution of α subunits and βγ subunits of heterotrimeric G proteins on Golgi membranes of the exocrine pancreas.
S.P. Denker, J.M. McCaffery, G.E. Palade, P.A. Insel, and M.G. Farquhar

M.D. Jacobson, M. Weil, and M.C. Raff

1053 Constitutive expression of the machinery for programmed cell death.

1061 Subunit composition of neurofilaments specifies axonal diameter.

1071 Sequence and transmembrane topology of MEC-4, and ion channel subunit required for mechanotransduction in Caenorhabditis elegans.
C.-C. Lai, K. Hong, M. Kinnell, M. Chalfie, and M. Driscoll

1083 Inhibition of IκB-α phosphorylation and degradation and subsequent NF-κB activation by glutathione peroxidase overexpression.
C. Kretz-Remy, P. Mehlen, M.-E. Mirault, and A.-P. Arrigo

1095 Motogenic and morphogenic activity of epithelial receptor tyrosine kinases.

1109 Endoglin modulates cellular responses to TGF-β1.

1123 Activities of the Wnt-1 class of secreted signaling factors are antagonized by the Wnt-5A class and by a dominant negative cadherin in early Xenopus development.
M.A. Torres, J.A. Yang-Snyder, S.M. Purcell, A.A. DeMarais, L.L. McGrew, and R.T. Moon

1139 ADDITIONS AND CORRECTIONS

Cover picture: Action of the metazoan RNA polymerase I enhancer. This chromatin spread shows three transcribing enhancer-bearing rRNA genes, following their injection into Xenopus oocytes. Active enhancer-less genes yield equally densely packed transcription units, but these are formed at only 1/30 the frequency. This results in the observed 30-fold transcriptional stimulation by the rDNA enhancer. See related article in this issue by Osheim et al., 943–954.
