

## On the cover

Cell adhesion sites in the rear of a migrating cell are loosened with help from endosomes carrying Endo180 (red), which leads to myosin light chain (blue) activation.

See page 339.

## NEWS

### In This Issue

- 194**
- Taking a Toll on neurons
  - Endosomes bring up the rear
  - Getting the embryo into shape
  - Membrane backtracking
  - Melanin's backups
- M. Leslie

### Research Roundup

- 196**
- Rosettes for elongation
  - Lipid microscopy
  - Innate tumorigenesis
  - Mopping up chemokines
  - Spinning septins
- W.A. Wells

## REVIEWS

### Comments

- 199** Darkness descends with two Rabs  
Michael S. Marks

### Mini-Reviews

- 201** Membranes of the world unite!  
Leonid V. Chernomordik, Joshua Zimmerberg, and Michael M. Kozlov

## RESEARCH ARTICLES

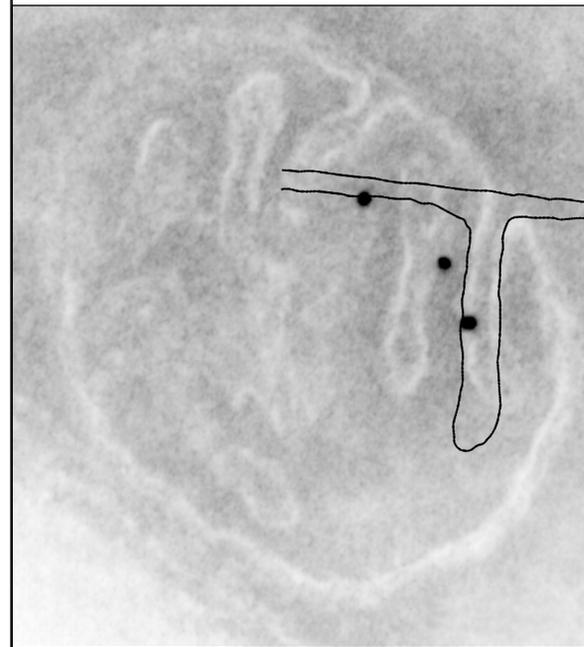

### Reports

- 209** Toll-like receptor 8 functions as a negative regulator of neurite outgrowth and inducer of neuronal apoptosis  
Yinghua Ma, Jianxue Li, Isaac Chiu, Yawen Wang, Jacob A. Sloane, Jining Lü, Bela Kosaras, Richard L. Sidman, Joseph J. Volpe, and Timothy Vartanian
- 217** Growth control by EGF repeats of the *C. elegans* Fibulin-1C isoform  
Daniel Hesselson and Judith Kimble

### Articles

- 225** Defective mitochondrial peroxiredoxin-3 results in sensitivity to oxidative stress in Fanconi anemia  
Sudit S. Mukhopadhyay, Kathryn S. Leung, M. John Hicks, Philip J. Hastings, Hagop Youssoufian, and Sharon E. Plon
- 237** Dynamic subcompartmentalization of the mitochondrial inner membrane  
Frank Vogel, Carsten Bornhövd, Walter Neupert, and Andreas S. Reichert
- 249** Reconstitution of protein targeting to the inner envelope membrane of chloroplasts  
Ming Li and Danny J. Schnell

- 261** SEL1L, the homologue of yeast Hrd3p, is involved in protein dislocation from the mammalian ER  
Britta Mueller, Brendan N. Lilley, and Hidde L. Ploegh
- 271** Rab38 and Rab32 control post-Golgi trafficking of melanogenic enzymes  
Christina Wasmeier, Maryse Romao, Lynn Plowright, Dorothy C. Bennett, Graça Raposo, and Miguel C. Seabra
- 283** MyoD-positive epiblast cells regulate skeletal muscle differentiation in the embryo  
Jacquelyn Gerhart, Justin Elder, Christine Neely, Jared Schure, Tage Kvist, Karen Knudsen, and Mindy George-Weinstein
- 293** Protein tyrosine phosphatase *TbPTP1*: a molecular switch controlling life cycle differentiation in trypanosomes  
Balázs Szöör, Jude Wilson, Helen McElhinney, Lydia Taberner, and Keith R. Matthews
- 305** Phosphorylation and activity of the tumor suppressor Merlin and the ERM protein Moesin are coordinately regulated by the Slik kinase

- 325** Spectrin functions upstream of ankyrin in a spectrin cytoskeleton assembly pathway  
Amlan Das, Christine Base, Srilakshmi Dhulipala, and Ronald R. Dubreuil
- 337** Endosomes generate localized Rho-ROCK-MLC2-based contractile signals via Endo180 to promote adhesion disassembly  
Justin Sturge, Dirk Wienke, and Clare M. Isacke
- 349** How the headpiece hinge angle is opened: new insights into the dynamics of integrin activation  
Eileen Puklin-Faucher, Mu Gao, Klaus Schulten, and Viola Vogel
- 361** Correction

Proteins of the mitochondrial inner membrane are unevenly distributed. Core1 (labeled) is part of the cristae membrane, whereas others belong to the inner boundary membrane. A model membrane section, used for plotting the location of gold particles, is shown.

**See page 237.**
