Figure S1. **A20^{FL/FL}ABIN-1^{FL/FL}TNF^{-/-} villin-ER/Cre⁺ mice are not rescued by broad-spectrum antibiotic treatment.** Kaplan-Meier survival curves of the indicated genotypes of mice treated with antibiotic drinking water starting 7 d before tamoxifen treatment and continued throughout the duration of tamoxifen injection. The number of mice in each group is indicated in the graph legend. Data are representative of at least two independent experiments.

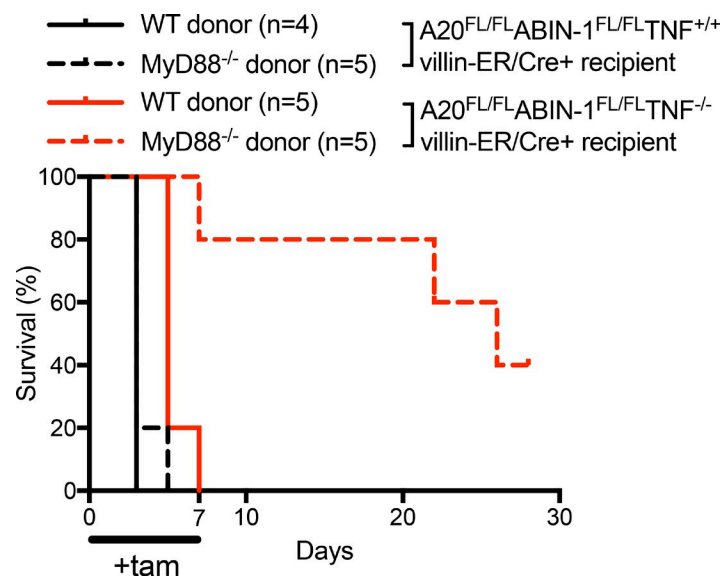

Figure S2. **A20^{FL/FL}ABIN-1^{FL/FL}TNF^{-/-} villin-ER/Cre⁺ mice are rescued by reconstitution with MyD88-deficient bone marrow.** Kaplan-Meier survival curves of irradiated A20^{FL/FL}ABIN-1^{FL/FL}TNF^{-/-} villin-ER/Cre⁺ or A20^{FL/FL}ABIN-1^{FL/FL}TNF^{+/+} villin-ER/Cre⁺ mice reconstituted with either WT or MyD88^{-/-} bone marrow, followed by treatment with tamoxifen. The number of mice in each group is indicated in the graph legend. Data are representative of at least two independent experiments.
