

# CONTENTS THE JOURNAL OF EXPERIMENTAL MEDICINE

Volume 150 No. 3 September 1, 1979

- 
- 413 L. G. HUNSICKER, T. P. SHEARER, S. B. PLATTNER, and D. WEISENBURGER. The role of monocytes in serum sickness nephritis
- 426 MYUNG CHUN, VILHO PASANEN, ULRICH HÄMMERLING, GÜNTHER F. HÄMMERLING, and MICHAEL K. HOFFMANN. Tumor necrosis serum induces a serologically distinct population of NK cells
- 432 NOBUKATA SHINOHARA and DAVID H. SACHS. Mouse alloantibodies capable of blocking cytotoxic T-cell function. I. Relationship between the antigen reactive with blocking antibodies and the *Lyt-2* locus
- 445 J. G. PATRICK SISSONS, ROBERT D. SCHREIBER, LUC H. PERRIN, NEIL R. COOPER, HANS J. MÜLLER-EBERHARD, and MICHAEL B. A. OLDSTONE. Lysis of measles virus-infected cells by the purified cytolytic alternative complement pathway and antibody
- 455 J. R. BATCHELOR, K. I. WELSH, A. MAYNARD, and H. BURGOS. Failure of long surviving, passively enhanced kidney allografts to provoke T-dependent alloimmunity. I. Retransplantation of (AS × AUG)F<sub>1</sub> kidneys into secondary AS recipients
- 465 K. I. WELSH, J. R. BATCHELOR, A. MAYNARD, and H. BURGOS. Failure of long surviving, passively enhanced kidney allografts to provoke T-dependent alloimmunity. II. Retransplantation of (AS × AUG)F<sub>1</sub> kidneys from AS primary recipients into (AS × WF)F<sub>1</sub> secondary hosts
- 471 JOHN C. RÖDER, LARS ÅHRLUND-RICHTER, and MIKAEL JONDAL. Target-effector interaction in the human and murine natural killer system. Specificity and xenogeneic reactivity of the solubilized natural killer-target structure complex and its loss in a somatic cell hybrid
- 482 Y. KITAMURA, M. SHIMADA, S. GO, H. MATSUDA, K. HATANAKA, and M. SEKI. Distribution of mast-cell precursors in hematopoietic and lymphopoietic tissues of mice
- 491 JOHN M. FIDLER. The induction of hapten-specific immunological tolerance and immunity in B lymphocytes. VI. Differential tolerance susceptibility in adult spleen as a function of B-cell maturation level
- 507 TAKAKI ITAYA and ZOLTAN OVARY. Suppression of IgE antibody production in SJL mice. IV. Interaction of primed and unprimed T cells
- 517 YVONNE J. ROSENBERG and JACQUES M. CHILLER. Ability of antigen-specific helper cells to effect a class-restricted increase in total Ig-secreting cells in spleens after immunization with the antigen
- 531 VINAY KUMAR, EDUARDO LUEVANO, and MICHAEL BENNETT. Hybrid resistance to EL-4 lymphoma cells. I. Characterization of natural killer cells that lyse EL-4 cells and their distinction from marrow-dependent natural killer cells
- 548 CHRISTOPHER J. PAIGE, PAUL W. KINCADE, MALCOLM A. S. MOORE, and GRACE LEE. The fate of fetal and adult B-cell progenitors grafted into immunodeficient CBA/N mice
- 564 RYUZO UEDA, HIROSHI SHIKU, MICHAEL PFREUNDSCHUH, TOSHITADA TAKAHASHI, LUCY T. C. LI, WILLET F. WHITMORE, HERBERT F. OETTGEN, and LLOYD J. OLD. Cell surface antigens of human renal cancer defined by autologous typing
- 580 JAY C. UNKELESS. Characterization of a monoclonal antibody directed against mouse macrophage and lymphocyte Fc receptors
- 597 J. D. SIPE, S. N. VOGEL, J. L. RYAN, K. P. W. J. MCADAM, and D. L. ROSENSTREICH. Detection of a mediator derived from endotoxin-stimulated macrophages that induces the acute phase serum amyloid A response in mice
- 607 JOSEF MICHL, MARGARET M. PIECZONKA, JAY C. UNKELESS, and SAMUEL C. SILVERSTEIN. Effects of immobilized immune complexes on Fc- and complement-receptor function in resident and thioglycollate-elicited mouse peritoneal macrophages
- 622 BRIAN V. JEGASOTHY and DONALD R. BATTLES. Immuno-suppressive lymphocyte factors. I. Purification of inhibitor of DNA synthesis to homogeneity
- 633 MARGARET J. POLLEY and RALPH L. NACHMAN. Human complement in thrombin-mediated platelet function. Uptake of the C5b-9 complex
- 646 STEPHEN M. HEDRICK and JAMES WATSON. Genetic control of the immune response to collagen. II. Antibody responses produced in fetal liver restored radiation chimeras and thymus reconstituted F<sub>1</sub> hybrid nude mice

- 653 JOHANNA A. GRIFFIN and FRANK M. GRIFFIN, JR. Augmentation of macrophage complement receptor function in vitro. I. Characterization of the cellular interactions required for the generation of a T-lymphocyte product that enhances macrophage complement receptor function
- 676 STEPHEN D. MILLER. Suppressor T-cell mechanisms in contact sensitivity. III. Apparent non-major histocompatibility complex restriction is a result of multiple sets of major histocompatibility complex-specific suppressor T cells induced by syngeneic 2,4-dinitrophenyl-modified lymphoid cells

#### BRIEF DEFINITIVE REPORTS

- 693 ROLF M. ZINKERNAGEL, A. ALTHAGE, and G. CALLAHAN. Thymic reconstitution of nude  $F_1$  mice with one or both parental thymus grafts
- 698 KENNETH R. SCHROER, K. JIN KIM, BENJAMIN PRESCOTT, and PHILLIP J. BAKER. Generation of anti-type III pneumococcal polysaccharide hybridomas from mice with an X-linked B-lymphocyte defect
- 703 Y. RIKIHISA and S. ITO. Intracellular localization of *Rickettsia tsutsugamushi* in polymorphonuclear leukocytes
- 709 LANNY J. ROSENWASSER, CHARLES A. DINARELLO, and ALAN S. ROSENTHAL. Adherent-cell function in murine T-lymphocyte antigen recognition. IV. Enhancement of murine T-cell antigen recognition by human leukocytic pyrogen
- 715 J. SPRENT and JENNIFER BRUCE. Lymphoid function in  $F_1 \rightarrow$  parent chimeras. Lack of evidence for adaptive differentiation of B cells or antigen-presenting cells
- 721 BETTY DIAMOND, BARBARA K. BIRSSTEIN, and MATTHEW D. SCHARFF. Site of binding of mouse  $IgG_{2b}$  to the Fc receptor on mouse macrophages

**PREPARATION OF MANUSCRIPT** Articles should conform to the style of a current issue of this journal or to the recommendations of the Style Manual for Biological Journals (4th edition 1978, American Institute of Biological Sciences, 1401 Wilson Blvd., Arlington, Va. 22209). Note that each reference should contain the title of the pertinent citation. Please supply a brief title for a running head, not exceeding 57 characters and spaces. Only original typescript is acceptable for the printer; in addition, submit a fully legible carbon, mimeographed, or Xerox copy. Double space entire manuscript, including references, legends, footnotes, and tables.

**PREPARATION OF ILLUSTRATIONS** Label all illustrations (photographs, micrographs, charts, or drawings) sequentially with arabic numerals; designate them as figures. Number tables with roman numerals. In the margin of the manuscript, indicate approximately where each figure or table should appear.

**PAGE SIZE** The text block on each Journal page is  $5 \times 7\frac{3}{4}$  inches. Plan illustrations, including their legends, to fit within these dimensions after reduction. Avoid figures that exceed 5 inches in width unless they can fill the entire page, including margins. The maximum area for such full-page figures, including their legends, is  $5\frac{1}{2} \times 8$ .

**LINE DRAWINGS** Provide original ink drawing (preferably  $8\frac{1}{2} \times 11$  inches maximum). These give the sharpest reproductions. The lettering should be sans serif, and of consistent size, and so planned that the size of the lettering is in scale with the size and complexity of the figures. Lettering and labeling should be large enough to permit reduction to a minimum size. Capital letters and numbers should be  $1\frac{1}{2}$  to  $1\frac{3}{4}$  mm high after reduction.

**MICROGRAPHS** Micrographs should be planned so that they can be reproduced same size (not reduced). Figure numbers and lettering should be  $2\frac{1}{2}$  to 3 mm high in sans serif style. If authors are unable to provide figures labeled satisfactorily, the Press will label them; in this case, the author must provide an overlay or diagram to show exactly where such labeling should appear.

In general, limit the field of a micrograph to the regions and structures discussed in the report; eliminate irrelevant structures or expanses. Cropping unnecessary areas from micrographs saves space and expense. If a micrograph must be specifically oriented, mark "top" on the back of the print.

Micrographs that are grouped should be of uniform size and shape, with the edges of the prints touching. The engraver will tool thin white lines between figures. Plan the over-all size of the grouping so the legend will fit below the composite; if the grouping occupies a full page, the legend will appear at the foot of the facing page. The Journals Office prefers that multiple photographs be submitted unmounted with a diagram showing the desired layout.
