

# CONTENTS THE JOURNAL OF EXPERIMENTAL MEDICINE

Volume 160 No. 5 November 1, 1984

- 
- 1261 KENNETH M. PETERSON and JOHN F. ALDERETE. *Trichomonas vaginalis* is dependent on uptake and degradation of human low density lipoproteins
  - 1273 R. VAN FURTH and M. M. C. DIESSELHOFF-DEN DULK. Dual origin of mouse spleen macrophages
  - 1284 ARTHUR WEISS and JOHN D. STOBO. Requirement for the coexpression of T3 and the T cell antigen receptor on a malignant human T cell line
  - 1300 STANLEY J. WATERS, PAOLO R. LUZZATTI, and CONSTANTIN A. BONA. Functional properties of T cell clones with a double specificity for alloantigens and foreign antigens
  - 1316 MICHAEL A. NORCROSS, DREW M. BENTLEY, DAVID H. MARGULIES, and RONALD N. GERMAIN. Membrane Ia expression and antigen-presenting accessory cell function of L cells transfected with class II major histocompatibility genes
  - 1338 MICHAEL J. PARMELY, BARBARA H. IGLEWSKI, and REBECCA T. HORVAT. Identification of the principal T lymphocyte-stimulating antigens of *Pseudomonas aeruginosa*
  - 1350 JUDITH P. JOHNSON and RUDOLF WANK. Identification of two *cis*-encoded HLA-DQ molecules that carry distinct alloantigenic specificities
  - 1360 MICHAEL J. JANUSZ, CHAMROEN CHETTY, ROBERT A. EISENBERG, WILLIAM J. CROMARTIE, and JOHN H. SCHWAB. Treatment of experimental erosive arthritis in rats by injection of the muralytic enzyme mutanolysin
  - 1375 BERHANE GHEBREHIWET, LOUI SILVESTRI, and C. McDEVITT. Identification of the Raji cell membrane-derived Clq inhibitor as a receptor for human Clq. Purification and immunochemical characterization
  - 1390 KARL WELTE, MICHAEL ANDREEFF, ERICH PLATZER, KAREN HOLLOWAY, BERISH Y. RUBIN, MALCOLM A. S. MOORE, and ROLAND MERTELSMANN. Interleukin 2 regulates the expression of Tac antigen on peripheral blood T lymphocytes
  - 1404 SUSAN A. JONES, KEVIN S. MARCHITTO, JAMES N. MILLER, and MICHAEL V. NORGARD. Monoclonal antibody with hemagglutination, immobilization, and neutralization activities defines an immunodominant, 47,000 mol wt, surface-exposed immunogen of *Treponema pallidum* (Nichols)
  - 1421 DAVID H. SHERMAN, DAVID M. KRANZ, and HERMAN N. EISEN. Expression of structurally diverse Qa-2-encoded molecules on the surface of cloned cytotoxic T lymphocytes
  - 1431 ROBERT H. WILTROUT, BONNIE J. MATHIESON, JAMES E. TALMADGE, CRAIG W. REYNOLDS, SHU-REN ZHANG, RONALD B. HERBERMAN, and JOHN R. ORTALDO. Augmentation of organ-associated natural killer activity by biological response modifiers. Isolation and characterization of large granular lymphocytes from the liver
  - 1450 THOMAS A. WALDMANN, CAROLYN K. GOLDMAN, RICHARD J. ROBB, JOEL M. DEPPER, WARREN J. LEONARD, SUSAN O. SHARROW, KATHLEEN F. BONGIOVANNI, STANLEY J. KORSMEYER, and WARNER C. GREENE. Expression of interleukin 2 receptors on activated human B cells
  - 1467 G. J. RUSSELL-JONES, E. C. GOTSCHLICH, and MILAN S. BLAKE. A surface receptor specific for human IgA on group B streptococci possessing the Ibc protein antigen
  - 1476 G. J. RUSSELL-JONES and E. C. GOTSCHLICH. Identification of protein antigens of group B streptococci, with special reference to the Ibc antigens
  - 1485 M. FRANCOTTE and J. URBAIN. Induction of anti-tobacco mosaic virus antibodies in mice by rabbit antiidiotypic antibodies
  - 1495 M. D. PESCOVITZ, J. R. THISTLETHWAITE, JR., H. AUCHINCLOSS, JR., S. T. ILDSTAD, T. G. SHARP, R. TERRILL, and D. H. SACHS. Effect of class II antigen matching on renal allograft survival in miniature swine
  - 1509 LEENA KOULU, AKIHIRO KUSIMI, MALCOLM S. STEINBERG, VERA KLAUS-KOVTUN, and JOHN R. STANLEY. Human autoantibodies against a desmosomal core protein in pemphigus foliaceus
  - 1519 U. GALILI, E. A. RACHMILEWITZ, A. PELEG, and I. FLECHNER. A unique natural human IgG antibody with anti- $\alpha$ -galactosyl specificity
  - 1532 NARELLE BOWERN, IAN A. RAMSHAW, IAN A. CLARK, and PETER C. DOHERTY. Inhibition of autoimmune neuropathological process by treatment with an iron-chelating agent

CONTENTS CONTINUED ON REVERSE OF THIS COVER

- 1544 MARTIN F. KAGNOFF, RALEIGH K. AUSTIN, JEFFREY J. HUBERT, JOHN E. BERNARDIN, and DONALD D. KASARDA. Possible role for a human adenovirus in the pathogenesis of celiac disease
- 1558 M. EDWARD MEDOF, TAROH KINOSHITA, and VICTOR NUSSENZWEIG. Inhibition of complement activation on the surface of cells after incorporation of decay-accelerating factor (DAF) into their membranes

#### BRIEF DEFINITIVE REPORTS

- 1579 LIDIA LARIZZA, VOLKER SCHIRRMACHER, and ECKHARD PFLÜGER. Acquisition of high metastatic capacity after in vitro fusion of a nonmetastatic tumor line with a bone marrow-derived macrophage
- 1585 STEPHEN B. ALEY, JAMES A. SHERWOOD, and RUSSELL J. HOWARD. Knob-positive and knob-negative *Plasmodium falciparum* differ in expression of a strain-specific malarial antigen on the surface of infected erythrocytes
- 1591 BRUCE A. FENDERSON, URI ZEHAVI, SEN-ITIROH HAKOMORI. A multivalent lacto-*N*-fucopentaose III-lysyllysine conjugate decompacts preimplantation mouse embryos, while the free oligosaccharide is ineffective
- 1597 LAWRENCE K. L. JUNG, TOSHIRO HARA, and SHU MAN FU. Detection and functional studies of p60-65 (Tac antigen) on activated human B cells

COPYEDITING AND PRODUCTION *Heather Libbey and Richard Cunniff*

**PREPARATION OF MANUSCRIPT** Articles should conform to the style of a current issue of this journal or to the recommendations of the *Council of Biology Editors Style Manual* (4th edition, 1978, American Institute of Biological Sciences, 1401 Wilson Blvd., Arlington, Va. 22209). Note that each reference should contain the title of the pertinent citation. Please supply a brief title for a running head, not exceeding 55 characters and spaces, with no abbreviations. Capitalize trade names and give manufacturers' full names and addresses. Only original typescript is acceptable for the printer; in addition, submit a fully legible carbon, mimeographed, or Xerox copy. Double space entire manuscript, including references, legends, footnotes, and tables.

**PREPARATION OF ILLUSTRATIONS** Label all illustrations (photographs, micrographs, charts, or drawings) sequentially with arabic numerals; designate them as figures. Number tables with roman numerals. In the margin of the manuscript, indicate approximately where each figure or table should appear.

**PAGE SIZE** The text block on each Journal page is 5 × 7¾ inches. Plan illustrations, including their legends, to fit within these dimensions after reduction.

**LINE DRAWINGS** Provide original ink drawing (preferably 8½ × 11 inches maximum). These give the sharpest reproductions. The lettering should be sans serif, and of consistent size, and so planned that the size of the lettering is in scale with the size and complexity of the figures. Lettering and labeling should be large enough to permit reduction to a minimum size. Capital letters and numbers should be 1½ to 1¾ mm high after reduction.

**MICROGRAPHS** Micrographs should be planned so that they can be reproduced same size (not reduced). Figure numbers and lettering should be 2½ to 3 mm high in sans serif style. If authors are unable to provide figures labeled satisfactorily, the Press will label them; in this case, the author must provide an overlay or diagram to show exactly where such labeling should appear.

In general, limit the field of a micrograph to the regions and structures discussed in the report; eliminate irrelevant structures or expanses. Cropping unnecessary areas from micrographs saves space and expense. If a micrograph must be specifically oriented, mark "top" on the back of the print.

Micrographs that are grouped should be of uniform size and shape, with the edges of the prints touching. The engraver will tool thin white lines between figures. Plan the over-all size of the grouping so the legend will fit below the composite; if the grouping occupies a full page, the legend will appear at the foot of the facing page. The Journals Office prefers that multiple photographs be submitted unmounted with a diagram showing the desired layout.
