Cover picture: Actin-rich membrane cups around Fc γ R-bound particles in macrophages derived from mice genetically deficient for Syk tyrosine kinase. Polymerized actin structures (*green*) form around Fc γ R-bound particles and are indistinguishable from those formed in wild-type cells. However, Syk-deficient cells are unable to affect closure of these actin cups. Syk-deficient macrophages are defective in other Fc γ R-induced signaling events as well. See related article in this issue by Crowley et al., pp. 1027–1039.
