

ON THE COVER

Teams led by Protti and Palucka find that breast cancer cells and cancer-associated fibroblasts release thymic stromal lymphopoietin (TSLP) in human breast and pancreatic tumors, respectively. TSLP acts on DCs to drive Th2 inflammation in these tumors. Image depicts TSLP (green) in a lung metastasis in a humanized mouse. Artwork by Joshua Graver (joshua-graver@mac.com). See pages 469 and 479
