ON THE COVER

Silva et al. describe a population of vasculature-associated fat macrophages that adapt to inflammatory and metabolic challenges. The cover shows a confocal image of epididymal full-mount sections showing the distribution of VAMs (dextran-rhodamine⁺DAPI⁺) in close contact to blood vessels labeled with isolectin. Bodipy labels lipid droplets in macrophages and adipocytes. The image was taken from the original manuscript and modified by the JEM editorial office. See page 786.
