

General Physiology is the study of biological mechanisms through analytical investigations, which decipher the molecular and cellular mechanisms underlying biological function at all levels of organization.

The mission of *The Journal of General Physiology* is to publish articles that elucidate important biological, chemical, or physical mechanisms of broad physiological significance.

Generally Physiological

- 165 Of capturing fish, mobilizing enzymes, and a surprising source for serotonin. Elizabeth M. Adler

Commentary

- 167 A better method to measure total calcium in biological samples yields immediate payoffs. Carlo Manno and Eduardo Ríos

Research Articles

- 173 Structural and functional properties of ryanodine receptor type 3 in zebrafish tail muscle. Stefano Perni, Kurt C. Marsden, Matias Escobar, Stephen Hollingworth, Stephen M. Baylor, and Clara Franzini-Armstrong
- 185 Positions of the cytoplasmic end of BK α S0 helix relative to S1–S6 and of β 1 TM1 and TM2 relative to S0–S6. Guoxia Liu, Sergey I. Zakharov, Yongneng Yao, Steven O. Marx, and Arthur Karlin
- 201 Identification of a key residue in K_v7.1 potassium channel essential for sensing external potassium ions. Wenyi Wang, Maria Cristina Perez Flores, Choong-Ryoul Sihn, Hyo Jeong Kim, Yinuo Zhang, Karen J. Doyle, Nipavan Chiamvimonvat, Xiao-Dong Zhang, and Ebenezer N. Yamoah
- 213 Rhodopsin kinase and recoverin modulate phosphodiesterase during mouse photoreceptor light adaptation. Ching-Kang Chen, Michael L. Woodruff, and Gordon L. Fain
- 225 Nonexocytotic serotonin release tonically suppresses serotonergic neuron activity. Boris Mlinar, Alberto Montalbano, Gilda Baccini, Francesca Tatini, Rolando Berlinguer Palmini, and Renato Corradetti

Corrections

- 253 Structural and functional properties of ryanodine receptor type 3 in zebrafish tail muscle. Stefano Perni, Kurt C. Marsden, Matias Escobar, Stephen Hollingworth, Stephen M. Baylor, and Clara Franzini-Armstrong
